

Ed.D. program evolves to serve needs

By Wayne Johnson

With its focus on producing master teachers to "influence, create and lead system-wide change," it's no surprise WestConn's Doctorate of Education in Instructional Leadership program itself continues to adapt and evolve in its third academic year.

"We're not making changes for the sake of change," said Professor of Education Dr. Maria Delcourt, the program's coordinator. "We're looking to make improvements and finding ways to make the program better."

There are a number of significant developments in the program designed primarily for K-12 educators, such as the potential creation of a partnership with Central Connecticut State University (CCSU), addition of more students, and adaptation of the focus for particular courses and the program as a whole.

"We feel it's important we provide a quality program that competes with the 12 other instructional leadership programs in the country and responds to the unique needs of our students and the region's school systems," said Dean of Graduate Studies and External Programs Dr. Ellen Durbin. "We're getting feedback from our students through their course evaluations talking to local school administrators to find out their concerns and responding to what we hear."

Newtown High School science teacher Frank Lakin is one of the students working to add the Ed.D. to his credentials.

"I'm interested in improving education at the classroom level, and the program focuses on that," said the 33-year-old Sandy Hook resident who was selected in the Teachers Insurance Plan as 2005 Teacher of the Year in Connecticut. "The web design part of the program is concentrated on the grassroots approach to improvement. We're looking at one person helping another person improve — and we're

educators who want to remain in classrooms as they lead improvements. But nearly half of the students enrolled in the first cohort said they'd like to earn the endorsement, and several western Connecticut school administrators said they need educators with the credentials.

"We didn't initially anticipate the example of WestConn being responsive to the needs of students and the community."

Based on input from the students and local school administrators, the university is developing a partnership with CCSU to give WestConn Ed.D. students the chance to earn an Intermediate Administration or Supervision (092) Certificate. This development in the program's progression is the addition of a second certification, CCSU will deliver two other courses in Danbury and the students will complete supervised internships in their school systems.

Another particularly noteworthy development in the program's progression is the addition of a second certification, CCSU will deliver two other courses and the program as a whole.

"We feel it's important we provide a quality program that competes with the 12 other instructional leadership programs in the country and responds to the unique needs of our students and the region's school systems," said Dean of Graduate Studies and External Programs Dr. Ellen Durbin. "We're getting feedback from our students through their course evaluations talking to local school administrators to find out their concerns and responding to what we hear."

cohort. Lakin and his 22 classmates began the 60-credit program in 2003-04, and they are set to complete the coursework portion in 2005-06. They then will complete their dissertations and are scheduled to receive their degrees in 2007. The second cohort of 17 students started this fall, and they are expected to complete the program in 2009.

"The first cohort continues to surprise and impress us," Durbin said.

"We put the students in situations, such as developing a chapter of the Phi Delta Kappa national education honor society, and presenting information about the Ed.D. to the (Connecticut State University System) Board of Trustees,

and they continue to exceed our expectations."

The second group mirrors the first cohort closely in that there's a diverse mixture of backgrounds and a wide array of talents," Durbin added. "We believe they're going to be equal in their performance to the first cohort, and they may even surpass them because they will have the benefit of the mentoring from the first cohort."

As part of the program's evolution, Delcourt, Durbin and others in the department of education and educational psychology are creating opportunities for the two groups to interact. At the beginning of the fall semester, Durbin hosted an orientation and reception. The orientation gave the second cohort

"A-B-D." phenomenon refers to students who completed all the coursework for doctoral degrees but never finished their dissertations. The faculty members plan to work with the students every step of the way to avoid A-B-D.

As part of the effort, faculty gave the first cohort students feedback as they identified problems or issues in their plans and developed the topics they plan to research. Each student is assigned a primary dissertation adviser, who is a member of the faculty, and two secondary advisers who may be faculty or others who have earned a doctorate and have expertise related to their research. The goal is to ensure the students have the support needed to complete the dissertations, which typically are comprised of hundreds of pages, to provide in-depth insight about the research topic.

University officials want the first cohort students to mentor the second group. So instead of bringing in a professional expert to guide the students through a particular issue during the fall semester, the university gave the two groups another chance to interact. During a November conference, the first cohort students formed groups based on the nature of their research and made presentations about their dissertation topics to each other and the second cohort.

"It allowed the first cohort students to be in a leadership position and to showcase what they've learned. They discussed their dissertation topics and outlined how they plan to accomplish the research in their school systems," Durbin said. "The cohort two students got a realistic preview of what's ahead for them. Hopefully, it will get them thinking. We want them to go back to their classrooms thinking about the research topics they might explore in their schools."

The program is being tailored to ensure the students complete their dissertations and avoid a pitfall common to other doctoral programs, Delcourt and Durbin said. The "all-but-dissertation" or

cohort 1.5 phenomenon refers to students specific information about upcoming courses and expectations. During the reception, the first group of students joined the program's advisory board, faculty members and staff to greet the second cohort.
